

PG PLATINUM

Simplify your cooling system maintenance programme with PG Platinum; advanced engine protection for any engine anywhere.

Fully approved by major engine manufacturers including; Cummins, Caterpillar, Detroit, Navistar, Volvo, Mack, MAN, Iveco, DAF and many more.

Extended service intervals, advanced liner pitting and corrosion protection with proprietary scale inhibitors for your engine.

Safer to handle Propylene Glycol (PG) is less toxic than Ethylene Glycol, premixed for best performance, PG Platinum is compatible with all other coolants.

Biodegradable NAPS free formulation meets global OEM specifications for containing no Nitrates, Amines, Phosphates, Borates or Silicates.

PG Platinum Compatible with all Coolants			PG Plus Compatible with other			Compleat - 50 50%

			Test Kit		CC2602M		

ANTIFREEZE

Components of coolants are Supplemental Coolant Additives, known as SCAs, and good quality water. SCAs are added to the coolant mixture to improve engine protection against corrosion, scale and liner pitting. Water filters containing SCA provide a simple method to replace depleted chemicals. Antifreeze is not a coolant but an ingredient in the coolant mix.

TRT TIP

Premixed coolants eliminate concerns with water quality or mix ratios.
